Fall Oral Rabies Vaccination Notice

STEUBENVILLE, OH – The United States Department of Agriculture, Wildlife Services program (USDA-WS) will distribute oral rabies vaccine (ORV) baits in Ohio between August 7 and August 24, 2026 to vaccinate raccoons against the rabies virus. Implementation of this program in Ohio is a cooperative effort between USDA, the Centers for Disease Control and Prevention, the Ohio Department of Health, and other agencies.

Beginning on August 7, baits containing the oral rabies vaccine (ORV) will be distributed across a 1700 square-mile bait zone in eastern Ohio, targeting raccoons and other wildlife. These baits will be distributed by low-flying airplanes and helicopter (if applicable) throughout a vaccination area that includes parts of the following counties: Ashtabula, Belmont, Carroll, Columbiana, Harrison, **Jefferson**, Mahoning, Portage, and Trumbull and the cities of Ashtabula, Belle Vista, Boardman, Conneaut, Edgewood, Geneva, Hubbard, Lisbon, Niles, Poland, Struthers, Warren, and Youngstown.

The ORV baits are blister packets containing liquid vaccine and coated with an edible, vanilla-scented wax to attract raccoons. Each bait is marked with a toll-free number (1-888-574-6656) for people to call for information if they find a bait. It is recommended that anyone who finds a bait leave it alone to allow wildlife to find it. However, if a bait is intact and out in the open, it can be tossed deeper into the woods or brush where a wild animal is more likely to find it. People should wear gloves or use a towel if it is necessary to handle baits and wash their hands afterward. Pet owners should not attempt to take baits away from their pets, as they may be bitten in the process and exposed to the vaccine. Exposure to components within the bait may result in fever, sore throat, headache, or conjunctivitis; signs and symptoms may appear up to 21 days following contact. Pets consuming numerous baits may experience vomiting or diarrhea that is self-limiting. All adverse reactions should be reported to the Ohio Department of Health using the aforementioned phone number.
